hi ankit,

this is shekhar, we spoke on linkedin. thanks for getting back to me.

just a quick intro: im a pre final year student at iit patna doing a dual degree (btech + mba). i'd really like to work with the team at klimashift, in any of growth, gtm, product, ai research or founders office. the title doesn't really matter to me, i just want to work on the problem and be useful.

some stuff i've done that's relevant:
- built ecoverify, an ai agent that reads a company's sustainability report and checks its climate risk claims against real hazard data
- ai intern at quest global, where i built a knowledge graph over messy warehouse data
- took our campus's first finance fest from 0 to launch, handling everything from planning to outreach
- done certifications in ifrs sustainability standards and esg reporting

im someone who has a knack for figuring things out and i'm really good at getting things done. i'm also happy to take up a trial project or a small task first if that helps you see how i work.

resume is attached. lmk if there's anything that could work, would love to chat.

thanks,
shekhar

hi ankit, hope you're doing well! just wanted to follow up on my email and check if there are any updates.

best.

Hi Shekhar,

You must be in the middle of your semester, so how are you planning to do an internship?

Best,
Ankit

hi ankit,

good question. my b.tech part wraps up in november, so i'll be available to commit full-time from december. this is also a part of my course, so i can take up a six-month internship.

if that works, i can also start remotely right now or take up an assignment-based project to begin with. i really want to work with a startup, take ownership of things and learn as much as i can.

best,
shekhar

And what kind of roles do you want to get your hands dirty with? Technical, business, product, operations, anything else? Explain in detail.

hey ankit

the title doesn't really matter to me, but product and operations are two areas that really fascinate me. i'm also practically obsessed with data and finding ways to use it to solve problems and make better decisions and automating as much as possible and building evals for them.

since my mba will be in oscm, i feel working in these areas would also help me connect what i learn academically with real world problems.

i'd love to take ownership of something end to end and build things that have a real impact. would love to hear and connect on where you think i could be most useful at klimashift.

best,
shekhar

Understood. If product and operations are your interest areas, we have very complex and interesting problems to solve for.

I am attaching an assignment. Let's see your output. Feel free to use AI if you want, but in that case keep a separate document or notes detailing your own core ideas. Your core ideas are more important. Good luck!
